About the Conference

Manufacturing is the key for the economic growth of any nation. In order to boost the country's economy and lay a robust foundation, innovation in manufacturing practices is considered as an essential strategy. Material processing and testing are the subsets of manufacturing. Material processing involves a series of operations which converts industrial materials in raw state into finished products. Material testing is a process of measuring the characteristics and behavior of materials such as metals, ceramics, plastics, etc under various conditions. The data thus obtained can be used in specifying the suitability of materials for various applications. The main aim of this National Conference is to bring together all technocrats in a single platform to share their knowledge and experience on various innovative Material Processing and Testing techniques. The conference will provide an opportunity to Researchers and Engineers from industry, research laboratories and academia to present papers on latest advances on material processing and testing of new materials.
