Semester Subject Norma	3rd Mathematics III	Total Credit	3
Subject Name	Mathematics-III SYLLABUS		
Module-I	Random variables (Discrete and Continuous. Cumulative Distribution Function (CDF). Variance and standard deviation. Moments. Functions of a random variable. Distributions: Binomial, Poisson, normal, Gaussian, uniform (definitions and examples only). Moment generating function.		
Module-II	Pairs of random variables. Joint probability density function. Joint probability mass function. Marginal distribution. Functions of two random variables, PDF and expected values of the sum of two random variables		6 Hrs
Module-III	Probability Models of n Random Variables. Vector notation. Independence of random variables and random vector vectors. Expected value vector and correlation matrix.	ors. Functions of random	6 Hrs
Module-IV	Stochastic Processes. Definitions and examples. Types of stochastic processes. Random variables from random process.	rocesses. The Poisson	6 Hrs
Module-V	Markov Chains. Discrete-time Markov chain. Discrete-Time Markov chain dynamics. Limiting state probabilities chain. State classification.	for a finite Markov	6 Hrs
Essential Reading	<ol> <li>Roy D. Yates, Rutgers and David J. Goodman, Stochastic Processes, 2d Edition, John Wiley and Sons, INC.</li> <li>Gregory F Lawler, Introduction to Stochastic Processe, Chapman &amp; Hall/ CRC Press (Taylor Francis Group).</li> </ol>		
Course Outcomes	The objective of this course is to familiarize the prospective engineers with techniques in Probability and Statistic advanced level of Statistics that would be essential for Engineering disciplines. CO1. To apply different distributions in real life problems of industries CO2. To deal with problems that contains multivariable probability distribution. knowledge Probability Models of multi-Random Variables CO4. To learn use of stochastic processes in daily life		ts to deal with .To enrich
		Total Contract Hours	
Subject Code	CS1201	Total Contact Hour	30
Semester Subject Name	Brd Digital Logic Design	Total Credit	3
Course Objective	Provide students with basic idea of digital logic concepts.     Familiarize students with basic digital logic gates and their operations.     Expertise students with combinational logic circuits.     Analyze the operations of sequential logic circuits and designs.     Provide the sequential circuits.     EVILABLE		
	SYLLABUS Introduction to Digital Systems: Introduction to Digital electronics, Digital and Analog Signals and Systems, Bina	ry Digits, Logic Levels,	
Module-I	Introduction to Digital Systems: Introduction to Digital electronics, Digital and Analog Signals and Systems, Binary Digits, Logic Levels, Logic SystemsPositive and negative, Combinational and Sequential Logic Functions, Fixed-Function Logic Devices, Programmable Logic Devices. Number Systems and Codes: Introduction to Number Systems (Decimal, Binary, Octal and Hexadecimal), Conversion from one number system to other, Binary arithmetic operations, Representation of Signed Binary Numbers, BCD code, EBCIDIC code, Excess -3 code, Gray code, ASCII code.		4 Hrs
Module-11	Logic Gates: Logic variables, Logic Operators, Basic Logic Gates, Universal Gates and realization of Basic Gates using Universal Gates, Gate Delay. Boolean Algebra: Rules and laws of Boolean algebra, Demorgan's Theorems, Boolean expressions and Truth Tables, SOP and POS forms, Minterm and Maxterms, Canonical forms of Boolean expressions, Standard forms, Minimization Techniques for simplification of Boolean expressions using Karnaugh Map, Design of simple Logical Circuits.		8 Hrs
Module-III	Combinational Circuits: Introduction to combinational Circuits, Half Adder and Full Adder, Half Subtractor and Full Subtractor, Ripple/Parallel adder, Adder-Subtractor, Look-Ahead Carry Adder. BCD Adder, BCD Subtractor, BCD to Excess-3 and Excess-3 to BCD Code Converter, Binary to Gray and Gray to Binary Code Converter, Comparator, Parity Generator and Checker. Multiplexer, De multiplexer, Decoder, BCD to Seven Segment Display Decoder, Encoder, Priority Encoder.		8 Hrs
Module-IV	Sequential Circuits: Introduction to Sequential Circuits, Flip Flops-SR, D, JK, T, Triggering of Flip Flops, Master-Salve JK, Sequential Circuit Design. Shift Registers: Introduction to shift registers, Basic Shift Register Operations, types of shift registers, Bidirectional Shift Registers, Universal Shift Register.		6 Hrs
Module-V	Counters: Introduction to counters, Synchronous and AsynchronousCounters, Decade Counter, Ripple Counter, U Counter and Twisted Ring Counter.	Jp/Down Counter, Ring	4 Hrs
Essential Reading	<ol> <li>M. Morris Mano, Michael D. Ciletti, "Digital Design", Prentice Hall of India Pvt. Ltd. / Pearson Education Pvt.</li> <li>Donald P. Leach and Albert P.Malvino, "Digital Principles and Applications", TMH</li> </ol>	Ltd.	
Supplementary Reading	<ol> <li>John F.Wakerly, "Digital Design", Pearson/PHI.</li> <li>Donald D. Givone, "Digital Principles and Design", TMH.</li> <li>Charles H.Roth. "Fundamentals of Logic Design", Thomson Learning.</li> <li>G. K. Kharate, "Digital Electronics", OXFORD University Press.</li> <li>Thomas L. Floyd, "Digital Fundamentals", Pearson Education Inc.</li> </ol>		

Semester	3rd     Total Credit       Data Structures     Total Credit	3
Subject Name		
Course Objective	<ol> <li>Introduce the basic idea of data structure, arrays, linked lists, stacks, queues, and algorithms.</li> <li>Explore the linear data structures linked lists, Stacks, and Queues in more detail.</li> <li>Elaborate on non-linear data structures such as Graphs, Trees, BST, Spanning trees, etc.</li> <li>Discuss the Sorting and Searching algorithms and their operations.</li> <li>Study the different hashing techniques in detail.</li> </ol>	
	SYLLABUS	
Module-I	Introduction: Introduction to Data structures and Algorithms, Analysis of Algorithms, Asymptotic notations, Time and space trade-off, Abstract Data Type.Arrays, Row/Column major representation of Arrays, Sparse matrix.	4 Hrs
Module-II	Linked lists: Definition, types of linked list (Single, Double, Circular), operations on linked list, Application of linked list Stack: Representation, operations, and applications of Stack. Queue:Representation, operations, and applications. Types of Queues (Circular,	
Module-III	Priority, Deque). Tree:Introduction to tree, Binary tree - definitions and properties; binary tree traversal algorithms with and without recursion. Binary Search Tree (BST):Operations on BST, AVL tree balancing; B-tree; B+ tree, Heap. Graph: Representation, Traversals (BFS and DFS).	
Module-IV	Sorting: and Searching: Sorting: Internal vs. External sorting, Bubble,Insertion, Selection, Merge sort,Quick sort, Heap sort, Radix,Searching: Linear, Binary Search.	6 Hrs
Module-V	Hashing:Introduction, Hashing techniques, Hash function, Address calculation techniques- common hashing functions. Collision resolution techniques, Linear probing, quadratic probing, Double hashing and Rehashing.	5 Hrs
Essential Reading	1.Introduction to Data Structures with Applications by J. Tremblay and P. G. Sorenson (TMH) 2.Classic Data Structures – Debasis Samanta (PHI)	
Supplementary Reading	<ol> <li>Data Structures Using C – A.M. Tenenbaum (PHI)</li> <li>Data structures with C-by Seymour Lipschutz (Schaum Outline Series)</li> <li>Jata Structures and Algorithm Analysis in C – M. A. Weiss (Pearson Education)</li> <li>Fundamentals of Data Structures in C – by Horowitz, Sahni, and Anderson-Freed (Silicon Press 2007).</li> <li>Data Structures: A Pseudocode Approach with C, 2nd Edition, R. F. Gilberg and B.A. Forouzan, Cengage Learning.</li> </ol>	
Course Outcomes	After completion of the course successfully, students will have: CO1: Ability to understand the data structure and its application. CO2: Proficiency in selecting an efficient linear data structure and apply to solve its problem. CO3:Expertise in assessing efficiency trade-offs among different non- Linear data structures and implementations. CO4:Ability to apply Sorting and Searching operations in real-world problem solutions. CO5:Ability to design the programs using different data structures and hashing approaches.

Relational Database Design: Introduction to Relational database design, Functional dependencies, Armstrong's Axioms, Dependency	7 Hrs
Module-III	SYLLABUS           Introduction to Database and Data Models: Basics concepts of Databases and Database Management Systems, Database System           Architecture: Data Abstraction, Data Independence, Database Schema, Three-Schema Architecture, Data models: Entity-relationship           model and Relational model.           Relational Query Languages: Relational Algebra, Relational Calculus, Introduction to Structured Query Language (SQL), Data Definition           Language (DDL), Data Query Language (DQL), Data Manipulation Language (DML), Data Control Language (DCL), Integrity           Constraints.           Relational Database Design: Introduction to Relational database design, Functional dependencies, Armstrong's Axioms, Dependency           Preservation, Lossless design, Introduction to Normalization, Normal Forms: 1NF, 2NF, 3NF, BCNF, 4NF, 5NF.           Query Processing and Optimization:Basic Steps in Processing an SQL Query, Catalog Information for Cost Estimation, Measures of Query	7 Hrs 8 Hrs
Module-III Module-IV Module-V	SYLLABUS           Introduction to Database and Data Models: Basics concepts of Databases and Database Management Systems, Database System           Architecture: Data Abstraction, Data Independence, Database Schema, Three-Schema Architecture, Data models: Entity-relationship           model and Relational model.           Relational Query Languages: Relational Algebra, Relational Calculus, Introduction to Structured Query Language (SQL), Data Definition           Language (DDL), Data Query Language (DQL), Data Manipulation Language (DML), Data Control Language (DCL), Integrity           Constraints.           Relational Database Design: Introduction to Relational database design, Functional dependencies, Armstrong's Axioms, Dependency           Preservation, Lossless design, Introduction to Normalization, Normal Forms: 1NF, 2NF, 3NF, BCNF, 4NF, 5NF.           Query Processing and Optimization:Basic Steps in Processing an SQL Query, Catalog Information for Cost Estimation, Measures of Query           Cost, Selection Operation, Join Operations, Equivalence Rules, Query Optimization.           Transaction Processing:Transaction Concepts, Desirable Properties of Transactions, Schedules, Serializability of Schedules.           Concurrency Control and Recovery:Concurrency Control, Concurrency Control Schemes: Lock-BasedSchemes, Time Stamping Methods,	7 Hrs 8 Hrs 6 Hrs
Module-III Module-IV	SYLLABUS           Introduction to Database and Data Models: Basics concepts of Databases and Database Management Systems, Database System Architecture: Data Abstraction, Data Independence, Database Schema, Three-Schema Architecture, Data models: Entity-relationship model and Relational model.           Relational Query Languages: Relational Algebra, Relational Calculus, Introduction to Structured Query Language (SQL), Data Definition Language (DDL), Data Query Language (DQL), Data Manipulation Language (DML), Data Control Language (DCL), Integrity Constraints.           Relational Database Design: Introduction to Relational database design, Functional dependencies, Armstrong's Axioms, Dependency Preservation, Lossless design, Introduction to Normalization, Normal Forms: INF, 2NF, 3NF, BCNF, 4NF, 5NF.           Query Processing and Optimization:Basic Steps in Processing an SQL Query, Catalog Information for Cost Estimation, Measures of Query Cost, Selection Operation, Join Operations, Equivalence Rules, Query Optimization.           Transaction Processing:Transaction Concepts, Desirable Properties of Transactions, Schedules, Serializability of Schedules. Concurrency Control and Recovery:Concurrency Control, Concurrency Control Schemes: Lock-BasedSchemes, Time Stamping Methods, Database Recovery.           1.Introduction to Data Structures with Applications by J. Tremblay and P. G. Sorenson (TMH)	7 Hrs 8 Hrs 6 Hrs

Subject Code	CS1205	Total Contact Hour	20
Semester	2 <sup>rd</sup>	Total Credit	<u>30</u> 3
Subject Name	Object Oriented Programming	Total Credit	0
Pre-requisites	C Programming		
Course Objective	<ol> <li>To understand principles of object-oriented programming in a higher-level programming language.</li> <li>Analyze a problem statement and develop program using class, object and basic concept of object-oriented program Utilize polymorphism and object-oriented concept to frame object-oriented programming.</li> <li>Gain skills in designing, and programming for reuse of code using inheritance</li> <li>Establish development methods in object-oriented programming for exception handling and templates.</li> </ol>	gramming.	
	SYLLABUS		
Module-I	Principles of object-oriented programming: Object oriented programming (OOP) paradigm, basic concepts, Benefits of OOP, Disadvantages of conventional programming, Beginning with C++. Evolution of C++, Application of OOP. Classes and Objects:Basic structure of OOP. Declaring classes and objects. Class Access-specifier: public, private and protected. Defining member functions,Characteristics of member functions,classes, objects and memory, array of objects,local classes, new and delete operator.		5 Hrs
Module-II	Functions In C++: The mainfunction, function prototype, call by reference, return by reference, returning moreval arguments, constant argument, inline functions, Rules for inline functions. Static variable, function and object. Fr member function. Object as arguments Constructors And Destructors: Introduction, Characteristicsof constructors and destructors, types of constructors constructors, constructors with default arguments. Copy constructors, Dynamic constructor. Dynamic initializatic constructors. Calling constructors and destructors. Anonymous objects.	iend function. Recursive	7 Hrs
Module-III	Polymorphism: Introduction to polymorphism and types. Functionoverloading, operator overloading, overloading unaryoperators, overloading of binary operators, Overloading with friend function. Rules for overloadingoperator		5 Hrs
Module-IV	Inheritance: Introduction, types of inheritance: single inheritance, multilevel inheritance, multiple inheritance, hid hybrid inheritance, multipath inheritance, pointer to derived classes and base classes, pointer tomembers, Access pointers. Constructors, Destructors and polymorphism in inheritance, Object as a class member, Virtual class, fun- function. Abstract Classes.	ing private members with	7 Hrs
Module-V	Exception handling: Introduction, Principles of Exception handling, the keyword try, throw and catch, Exception handling mechanism, multiple catch statements, Catch multipleExceptions, Re-throwing Exception. Generic programming with Templates: Introduction, need of template, Definition of class template, Normal function template, working of function templates, Class template with more parameters, Function template with Arguments and multiple parameters.

Subject Code		Fotal Contact Hour	20	
Semester		Fotal Credit	1.5	
Subject Name	Digital Logic Design Laboratory	Iotal Cicuit	1.5	
Pre-requisites	Digital Logic Design Laboratory			
1 re-requisites				
	1. Provide students basic idea of realization of Logic Gates.			
	2. Familiarize students with Boolean algebra and different circuit simplification techniques.			
Course Objective	3. Analyze the operations of combinational logic circuits functions.			
	4. Expertise the students for implementation of logic circuits with minimum Gates.			
	5. Test and verify the implementation knowledge of students by a small project.			
	List of Experiments			
1	(i) Realization of Logic Gates.			
1	(ii) Realization of basic Logic Gates using Universal Logic Gates.			
2	Design Logic Circuit of some given Boolean expressions after simplification using Boolean Algebra.			
3	Design Logic Circuit of some given Boolean expressions after simplification using K-Map.			
4	(i) Design Half and Full Adder.			
	(i) Design 3-bit Adder-Subtractor circuit using Logic Gates.			
5	(i) Design 3-bit Adder-Subtractor circuit using Adders.			
6				
0	Design 4-bit BCD Adder.			
7	(i) Design BCD to Excess-3 code convertor.			
,	(ii) Design Excess-3 to BCD code convertor.			
_	(i) Design Binary to Gray code converter.			
8	(ii) Design Gray to Binary code converter.			
-	(ii) Design Gray to Binary code converter.			
	Design 2-bit/4-bit Comparator			
9	Design 2-bit/4-bit Comparator.			
	Small Hardware Project design.         CO1: Realize the concepts of digital Logic Gate operations and principles,         CO2: Conceptualize different types of Boolean Algebra laws, rules and theorems for circuit simplification.

	1) To know the fundamentals of MySQL and be familiar with SQL syntax of various operations.				
	2) To know how to create, maintain, and manipulate a relational database using SQL commands.				
Course Objective	<ul><li>3) To know how to combine rows from two or more tables based on a related column between them.</li><li>4) To be familiar with the usage of arithmetic operators, conditional restrictions, logical operators and SQL aggregate functions.</li></ul>				
	<ul> <li>5) To acquire knowledge on writing sub-queries and views.</li> </ul>				
1	List of Experiments Introduction to MySQL and basic commands for creating a database using CREATE DATABASE command and viewing it by SHOW DATA	ABASES command			
	(i) Build a database by creating table structures using the various data types and the CREATE TABLE command in MySQL.				
2	(ii) Apply various SQL constraints (NOT NULL, UNIQUE, PRIMARY KEY, DEFAULT, etc.) to the MySQL tables.				
3	<ul> <li>(i) Use of MySQL for deleting tables and displaying the structure of an individual table,</li> <li>(ii) Use of MySQL to list all the tables that have been created within a database, altering a table structure by ALTER TABLE command.</li> </ul>				
4	<ul><li>(i)Use of MySQL to INSERT, UPDATE and DELETE data from within a table.</li><li>(ii)Use of MySQL to retrieve data from a table using the SELECT statement.</li></ul>				
5 6	Use of MySQL to apply arithmetic operators in SQL statements. Use of MySQL to select rows from a table with conditional restrictions.				
7	(i)Use of MySQL to apply logical operators to combine multiple conditions. (ii)Write queries in MySQL on given exercises involving arithmetic operators, conditional restrictions and logical operators.				
8	(i)Use of MySQL to sort the data in the resulting query by applying ORDER BY clause (ascending (ASC) or descending (DESC)).				
9	(ii)Use of MySQL to perform mathematical summaries through the use of aggregate (or group) functions.				
10	Use of MySQL to perform join operations that merges rows from two or more tables satisfying certain join condition. (i)Use of MySQL to create sub-queries in MySQL. (ii)Write query to create views in MySQL using CREATE VIEW command.				
	CO1: Be familiar with fundamentals of MySQL and SQL syntax of various operations.				
	CO2: Be able to create, maintain, and manipulate a relational database by applying appropriate SQL commands. CO3: Be able to combine rows from two or more tables using different join operations.				
Course Outcomes	CO3: Be able to combine rows non-rows of more tables using directing on operations. CO4: Be familiar with the usage of usage of arithmetic operators, conditional restrictions, logical operators and SQL aggregate functions. CO5: Be able to create SQL sub-queries and views.

Course Outcomes	The objective of this course is to familiarize the prospective engineers with techniques in Discrete Mathematics. It aims to equip the students to deal with advanced level of Discrete Mathematics that would be essential for Engineering disciplines, especially for Computer Science, IT, Electronics, Electrical Engineering. The Students will Learn : CO1. To enrich knowledge of inference and logic CO2. To deal with problems that involves Warshall's algorithm. CO3. To apply Boolean algebra in engineering fields. CO4. To learn applications of graph theory in daily life CO5. To be familiar with groups, rings and fields in industry.			
Subject Code	C\$1206	Total Contact Hour	30	
Semester	4 <sup>th</sup>	Total Credit	30	
Subject Name	Computer Organization and Architecture		-	
Course Objective	Concept of Digital Logic Design 1. Provide students with basic idea of Different components of the Computer System and Computer arithmetic. 2. Familiarize students with the Instruction set Architecture and CPU organization. 3. Expertise students with Memory Design and Memory Operations, Memory characteristics. 4. Analyze the I/O operations, Compare different data transfer techniques and modes of data transfer. 5. Perform performance analysis of the system.			
	SYLLABUS			
Module-I	Introduction: Basic Organization of Computers, Basic Operational concepts, Registers, Data bus, Address bus, Concept of Harvard Architecture and Von-Neumann Architecture, IAS Computer. Computer Arithmetic: Binary Arithmetic operation,Decimal Arithmetic Operation, Floating Point Representatio operation, General Multiplication, Booth Multiplication and Division Algorithms, Array Multipliers.		6 Hrs	
Module-II	Instruction Set Architecture: GeneralInstruction Format, Three Address, Two Address, One Address and Zero Address Instruction, Addressing Modes, Types of Instruction, Instruction Cycle. CPU Organization: Data Path, Singlebus Data Path, Register transfers, Fetching and storing a word in Memory, Control sequences for operation of an Instruction, Multi bus Data Path, Simple ALU Design, Control Unit Operation: Hardwired Control Unit and Micro Programmed Control Unit, Control Word, Stack Organization, RPN, Evaluation of Arithmetic expression using RPN, Subroutine, Nested Subroutine.		8 Hrs	
Module-III	Memory Organization: Computers Memory System Overview, Characteristics of Memory System, Memory Hierarchy, Memory Classification, Semi Conductor Memory Organization, Memory Cell Operation. Cache Memory: Cache Principles, Levels of Cache, Cache Hit and Miss, Write Policies, Cache Mapping functions, Cache Page Replacement Algorithms. Virtual Memory, Virtual Memory Page replacement Algorithms, Associative Memory, Memory Interleaving.		8 Hrs	
Module-IV	Input/Output Organization and Communication: Peripheral Devices, Accessing I/O Devices, I/O Interface, Interrupt. Types of Data Transfer: Parallel and Serial Data Transfer, Synchronous Data Transfer, Asynchronous Data Transfer, Strobe Control, Handshaking, Asynchronous Serial Transfer. Modes of Transfer: Programmed I/O, Interrupt Initiated I/O, Direct Memory Access (DMA), DMA Controller, I/O Channel & Processor.		4 Hrs	
Module-V	Parallel Processing: Introduction to Pipelining, Instruction Pipeline, Arithmetic Pipeline, Speedup, Efficiency, Throughput, Pipeline Hazards. RISC and CISC Architecture.		4 Hrs	
Essential Reading	<ol> <li>V. Carl Hamacher, Z. G. Vranesic, and S. G. Zaky, "Computer Organization", TMH.</li> <li>M. Mano, "Computer System Architecture", Prentice Hall of India Pvt. Ltd. / Pearson Education Pvt. Ltd.</li> </ol>			
	<ol> <li>William Stallings, "Computer Organization &amp; Architecture", Prentice Hall of India Pvt. Ltd. / Pearson Educa</li> <li>John P. Hayes, "Computer Architecture and Organization", TMH.</li> <li>D. A. Patterson and J. L. Hennessy, "Computer Organization and Design", Morgan Kaufmann Publishers (El</li> <li>Kai Hwang and Faye A. Briggs, "Computer Architecture Parallel Processing", TMH.</li> </ol>			
Course Outcomes	CO1: Define and memorize different functional units and components of Computer. CO2: Conceptualize and discuss different types of Instruction, Instruction format, Instruction Cycle, Addressin CO3: Design different types of Memory and CU. CO4: Analyze, compare and differentiate Data transfer techniques. CO5: Solve different Pipeline and Pipeline Hazard problems.	g Modes and CPU organization	n.

emester	4 <sup>th</sup>	Total Credit	3	
Course Objective	DESIGN AND ANALYSIS OF ALGORITHMS 1. To understand asymptotic notations to analyze the performance of algorithms 2. To identify the differences in design techniques and apply to solve optimization problems, 3. To apply algorithms for performing operations on graphs and trees, solve novel problems by choosing the ap solution. 4. To justify the selection of algorithms 5. To analyze deterministic and nondeterministic algorithms to solve complex problems.	propriate algorithm design tecl	mique for their	
	SYLLABUS			
1odule-I	Introduction to Design and analysis of algorithms, Asymptotic analysis, Growth of Functions, Asymptotic notat of Recurrences by substitution, Recursion tree method, Master Method, Brute Force Technique, Divide and Co Quicksort, Merge Sort, Binary Search, Strassen's Matrix multiplication, Decrease and Conquer,Heap Sort.		5 Hrs	

Module-II	Dynamic Programming: Elements of Dynamic Programming, Matrix Chain Multiplication, Longest Common Subsequence, 0/1 Knapsack, Travelling Salesman Problem. Greedy Algorithms: Elements of Greedy Strategy, Activity Selection Problem, Fractional Knapsack Problem, Huffman Codes.	
Module-III	Data Structure for Disjoint Sets, Disjoint Set Operations, Minimum Spanning Trees: Kruskal algorithm, Prim's Algorithm, Single Source Shortest paths: Bellmen Ford Algorithm, Dijkstra's Algorithm, All Pair Shortest Path: Floyd-Warsall Algorithm,	
Module-IV	String matching: Introduction, Naive string matching algorithm,Rabin-Karp Algorithm, KMP Algorithms, Boyer- Moore Algorithm. Backtracking and Branch and Bound: Introduction, Eight queensproblem, Knapsack problem	6 Hrs
Module-V	Introduction to NP completeness: The class P and NP, NP- Complete Problems, NP-Hard Problems, Reduction, Satisfiability and Cool Theorem, Travelling Salesman problem, Hamiltonian problem, Clique Problem, Approximation algorithms.	k's 5 Hrs
Essential Reading	<ol> <li>T.H.Coremen, C. E. Leiserson, R.L. Rivest, C. Stein "Introduction to Algorithms" 3rd Edition, The MIT Press</li> <li>S. Dasgupta, C. H. Papadimitriou, and U. V. Vazirani, Algorithms, McGraw Hill Education</li> </ol>	
Supplementary Reading	<ol> <li>M.R.Kabat "Design and Analysis of Algorithms", PHI Learning (p) Ltd</li> <li>S. Sridhar "Design and Analysis of Algorithms", Oxford University Press</li> <li>A.V. Aho, J.E. Hopcroft, J.D. Ullman "The Design and Analysis of Algorithms" Pearson Education, NewDelhi</li> <li>K, Louden "Mastering Algorithms", O' Reily Media Inc</li> </ol>	
Course Outcomes	After completion of the course successfully, students will have: CO1: Ability of analyzing the performance of algorithms and of finding solution ofdivide and conquer algorithm. CO2: Proficiency in finding optimal solutions to various problem CO3:Expertise to find MST and shortest path problem. CO4: Ability to apply pattern matching algorithms to find particular pattern. CO5: Ability to differentiate polynomial and nonpolynomial problems.	
Subject Code Semester	CS1208 Total Contact Hou 4th Total Credit	ar 3 30
Subject Name	Computer Networks	50
Pre-requisites	Basic electronics, Computer Architecture.	
-	<ol> <li>Apply various routing algorithms over a network to provide optimal path, and examine the addressing entities of a network, study ar transport layer protocols like TCP, UDP.</li> <li>Understand how networks support various applications and services, such as web browsing, email, file sharing, through different processing entities of a network support various applications and services.</li> </ol>	-
	SYLLABUS	
Module-I	Introduction: Overview of Data Communications and Networking. Goals of networking, well-known applications such as web, e-mail, need for a layered architecture, OSI and Internet. The physical layer: Basics of communications; Physical media types and their importa bandwidth and bit-error-rate characteristics; Wired and Wireless media including copper cables, optical fiber and wireless, Switching Networks.	ant 6 Hrs
Module-II	Data Link Layer: Error Detection and correction, Types of Errors, Detection, Error Correction, Data Link Control and Protocols, Flow Error Control, Stop-and-wait ARQ. Go-Back-N ARQ, Selective Repeat ARQ, HDLC, Point-to-Point Protocol. Multiple Access, Random Access, Controlled Access, Channelization.Local area Network: Ethernet, Traditional Ethernet, Fast Ethernet	et
Module-III	Network Layer: Host to Host Delivery, Internetworking, addressing, Routing. Network Layer Protocols: ARP, RARP, NAT, BOOTP, DHCP, IPV4, ICMP, IPV6, ICMPV6. Transport Layer: Process to Process	6 Hrs
Module-IV	Delivery: UDP, TCP, congestion control and Quality of service. Application Layer:Client Server Model, Peer to peer network, Domain Name System (DNS): Electronic Mail (SMTP) and file transfer	8 Hrs
Module-V	(FTP) HTTP and WWW.	4 Hrs
Essential Reading	<ol> <li>Data Communications and Networking: Behrouz A. Forouzan, Tata McGraw-Hill, 5th Ed</li> <li>Computer Networks: A. S. Tannenbum, D. Wetherall, Prentice Hall, Imprint of Pearson 5th Ed.</li> </ol>	
Supplementary Reading	<ol> <li>Computer Networks:A system Approach:Larry L, Peterson and Bruce S. Davie,Elsevier, 4th Ed</li> <li>Computer Networks: Natalia Olifer, Victor Olifer, Willey India</li> <li>Data and Computer Communications: William Stallings, Prentice Hall, Imprint of Pearson, 9th Ed.</li> <li>Data communication &amp; Computer Networks: Gupta, Prentice Hall of India</li> <li>Network for Computer Scientists &amp; Engineers: Zheng, Oxford University Press</li> <li>Data Communications and Networking: White, Cengage Learning</li> </ol>	
Course Outcomes	CO1: Analyze the concepts of networks, types and architectures CO2: Identify error free transmission of data and analyze data collision with various protocols. CO3: Apply various routing algorithms over a network to provide optimal path. CO4: Examine the addressing entities of a network with implementation of TCP, UDP protocols. CO5: Illustrate the real time applications of networks Protocols	
Subject Code	CS1204 Total Contact Hou	ur 30
materix one	CS1204 Total Contact Hou	
•	4th Total Credit	3
Semester Subject Name	4th Total Credit Programming in Python	3

Module-I	Beginning Python Basics Introduction to Python Features of Python, Application of Python Data Types, Keywords, Identifiers, Literals, Constants. Python Indentation. Operators and expressions. Naming Conventions with examples, Managing Input and Output, Concept of Indentation. Conditional statement, Looping statements, break and continue, pass & return statements, Nesting of loops.		
Module-II	Modules: Built-in Modules, Import statement, Packages, Date and Time Modules. Array and its operations, Handling Strings and Characters, List: slicing, bound, cloning, nested list, list and methods, Adding Element: append, extend, count, index and insert). Mutability: Sort, reverse, remove, clear and pop. Map, Filter		
Module-III	Tuple and methods, Sets and methods, Dictionary: Basic operation, iterator and methods. Function: Introduction to Functions, passing arguments, Anonymous functions (Lambda Function), Recursive Functions.	6 Hrs	
Module-IV	Object Oriented Programming: Classes and Objects, Class methods. Encapsulation, Data Abstraction, Constructor, Destructor and Inheritance. Exception Handling: Handling Exceptions: try-except, try-finally	6 Hrs	
Module-V	Strings and Regular Expressions : Methods of String Objects, Escape Sequence, Iterating Strings, String Module, String Formatting, Regular Expressions: Re-Module File Handling: Introduction to File Handling, File Operations, Directories.	4 Hrs	
Essential Reading	Python Programming Python Programming for Beginners By By Adam Stewart     Python Cookbook By David Beazley and Brian K. Jones		
Supplementary Reading	1. Introduction to Python Programming By Gowrishankar S. Veena A 2.Python Programming: Using Problem Solving Approach, Oxford University Press by Reema Thareja 3.Python Programming University Press by Ch Satyanarayan, M Radhika, B N Jagadesh		
Course Outcomes	CO1: Understand the Python Language and its features. CO2: Apply sequence data and control statements to solve problem CO3: Able to create user defined functions to solve problems. CO4: Analyze the concept of OOPs and its implementation. CO5: Create the python program using strings and files.		
		20	
Subject Code Semester	HS1202 Total Contact Hour 4th Total Credit	<u>30</u> 2	
Subject Name	Organizational Behaviour		
Course Objective	<ol> <li>1: To understand the relevance of organizational behavior concepts and theories in real-life organizational settings &amp; to develop skills in crit decision –making, problem-solving in applying organizational behavior concepts to practical situations.</li> <li>2: To provide an understanding of individual behavior in the workplace, including personality, motivation, perception, learning, and attitude 3: To understand the impact of team composition, diversity, and communication on team performance &amp; to understand the role of motivation managing organization.</li> <li>4: To explore how organisational culture affects behavior, communication and decision making by enhancing creativity and innovation and phow to cope with change and stress.</li> <li>5: To Develop intercultural competence, including awareness, knowledge, and skills for effective communication, negotiation, and collabora SYLLABUS</li> </ol>	s. n and leadership in give an episteme	
Module-I	Fundamentals of OB & Understanding the Basic Framework of OB: Evolution of OB through Quality Management movement, Definitions, Scope & Importance of OB, Challenges (Diversity, Globalisation& Ethical Perspective) and opportunities for OB, models of OB, applying OB to solving problems.	6 Hrs	
Module-11	Understanding the Determinants of Individual Behavior:         Personality: Determinants           of personality, Theories of Personality (Type &Psychoanalytic theory), MBTI, Big five personality traits and other major traits influence workplace behavior.         Perception: Meaning, Perceptual Process, Application of Perception at Workplace.           Motivation: Motivation Framework, Content theory (Maslow's need hierarchy & Hertzberg's two factors theory), Process theory (Adam's Equity & Vroom's Expectancy theory), Job Design And motivation, Importance of motivation at Workplace.           Learning: Theories of learning (Classical Conditioning, Operant Conditioning, & Cognitive Theory), Principles of Learning. Bhavioral		
Module-III	modification through learning.           Understanding Group and Team Behavior at Workplace:         Group & Team:           Defining and classifying groups, the five-stage model of group development Group properties: Roles, norms, status, size and cohesiveness, Group decision making.         Leadership: Meaning, Definition & types of leadership: Trait theories, Behavioral theories, Contingency theories, Contemporary approaches to leadership, importance of leader in organisations.		
Module-IV	Iceadership, importance of leader in organisations.       Organisational         Understanding Group and Team Behavior at Workplace:       Organisational         Culture: Meaning, Definition, Cultural dimensions, effect of Organisational culture       Organisational change & Development: Nature, Levels & types of Change, Change Agents: Resistance to Change, Force field theory of Change, Managing the Change.		
Module-V	Conflict & International Organisational Behavior: Managing Conflict and Negotiations: Meaning, views, & levels of Conflict, Process of conflict, Conflict resolution techniques. Transactional Analysis: Meaning, Importance of TA, Life position, Ego states And their encounters. IOB: Internationalisation of Business, Cultural differences and similarities, Understanding Interpersonal behavior across culture through Hofstede's Cultural Dimensions		
wiodule- v	IOB: Internationalisation of Business, Cultural differences and similarities, Understanding Interpersonal behavior across culture through		

Supplementary Reading	<ol> <li>"Organizational Behavior: Improving Performance and Commitment in the Workplace" by Jason A. Colquitt, Jer Publisher: McGraw-Hill Education.</li> <li>"Organizational Behavior: Human Behavior at Work" by John W. Newstrom and Keith Davis. Publisher: McGra 3. "Organizational Behavior: An Evidence-Based Approach" by Fred Luthans. Publisher: McGraw-Hill Education.</li> <li>"Organizational Behavior: Emerging Knowledge, Global Reality" by Steven L. McShane and Mary Ann Von Gli 5. "Organizational Behavior and Management" by Ivancevich, Konopaske, and Matteson. Publisher: McGraw-Hill 6. "Organizational Behavior: Theory, Research, and Practice" by John R. Schermerhorn Jr., James G. Hunt, and Ri</li> </ol>	aw-Hill Education. inow. Publisher: McGraw Education.	Hill Education.
Course Outcomes	CO1. Explain the importance of organizational behavior in improving individual and organizational effectiveness CO2. Evaluate the effectiveness of different leadership styles and their application in different situations. CO3.Develop critical thinking, Creativity& Innovation, problem-solving, and communication skills necessary for s CO4. Develop strategies for managing organisational change effectively and maintainingsustainability. CO5. Apply organisational behavior concepts and theories to practical organisational situations.	-	ettings.

Subject Name	Computer Organization and Architecture Laboratory	Total offul	
Course Objective	<ol> <li>Provide students with basic idea of different Combinational and Sequential circuits.</li> <li>Enhance circuit implementation capabilities of students.</li> <li>Familiarize students with the different functional units of the computer.</li> <li>Expertise students with Memory Design and Memory Operations</li> <li>Design of a small project</li> </ol>		
	(i) Design 8-to-1 Multiplexer.		
1	(ii) Design 3-to-8 DeMultiplexer. (iii) Design 3-to-8 Decoder.		
2	Design BCD to Seven Segment display Decoder.		
3	<ul><li>(i) Design 8-to-3 Binary Encoder.</li><li>(ii) Design 4-to-2 Priority Encoder.</li></ul>		
4 5	Design 4×3 Array Multiplier. Design a Universal Shift Register.		
6	(i) Design Decade Counter. (ii) Design Up/Down Counter.		
7	Study of PC Trainer and familiarize with different functional units.		
8	Study and test of the ALU Trainer.		
9 10	Study and test of the Read/Write operation of the Memory unit. Small Hardware Project design.		
Course Outcomes:	CO1: Define and memorize different functional units and components of Computer. CO2: Design and implement different combinational and sequential circuits. CO3: Test and verify Memory and ALU operations. CO4: Analyze the functionality of different logic circuits. CO5: Solve small problem with circuit design.		
	SESSIONAL		••
Subject Code	CS1288 4tb	Total Contact Hour Total Credit	20
Semester Subject Name	4th Design & Analysis of Algorithms Laboratory	Total Creuit	1.5
Pre-requisites	None		
Course Objective	<ul> <li>To implement and compare different sorting and searching algorithms.</li> <li>To demonstrate the implementation of various divide and conquer algorithms.</li> <li>To find optimal solution using dynamic and greedy algorithm.</li> <li>To implement spanning tree and shortest path algorithm</li> <li>To Solve string matching problem</li> </ul>		
	List of Experiments		
1	Illustration of Analysis of Algorithms: Comparison of sorting algorithms like Bubble, Insertion and Selection. Heap sort using a max heap.		
2	Divide and Conquer Algorithm: i. Quick Sort, ii. Merge Sort iii. Binary Search.		
3	Application: i. Quick sort ii. Merge Sort iii. Binary Search.		
4	Dynamic Programming: i. Longest Common Subsequence Problem ii. Matrix Chain Multiplication Problem iii.0/1 knapsack Problem iv. Travelling Salesman Problem		
5	Greedy Algorithm: i. Fractional knapsack problem ii. Huffman Coding		
6	Minimum Spanning Tree: i. Kruskal's algorithm ii. Prim's algorithm		

	Shortest Path Problem:		
7	i. Dijkstra algorithm		
	ii. Bellman ford algorithm		
	Desiderables and Descel & Descel		
8	Backtracking and Branch & Bound:		
0	Queen Problem		
	String Marching Algorithm		
9	i. Naive string matching algorithm		
<i>,</i>	ii. Rabin karp algorithm		
	Approximation Algorithm:		
10	Travelling Salesman Problem		
	CO1: Ability to compare and implement various divide and conquer algorithms.		
	CO2: Improved skill in choosing and developing algorithms for optimization problems.		
Course Outcomes:	CO3: Potential to demonstrate and implement graph algorithms like spanning tree and shortest path.		
course outcomes.	CO4: Ability to implement different string matching algorithms.		
	CO5: Using approximation algorithm for NP complete problems.		
	SESSIONAL		
Subject Code	CS1289	Total Contact Hour	20
Semester	4th	Total Credit	1.5
Subject Name	Computer Networks Laboratory	1	
	The objective of this lab course is to:		
	1. To understand the working principle of various communication protocols.		
Course Objective	2. To know the concept of data transfer between nodes.		
Course Objective	3. To analyze the various routing algorithms.		
	4. Analyze structure and formats of TCP/IP layer protocols using network tools.		
	5. Implementing various network algorithms such as error control, error detection, routing, and security related algorithms	gorithms.	
	List of Experiments		
1	Introduction to Packet Tracer and Implementation of different Network Topology using Packet Tracer.		
	(i) Limited broadcast and directed broadcast.		
•	(ii) IP addressing with class full and class less addressing scheme.		
2	(iii) Sub netting and super netting.		
	(iv) Concept of CIDR.		
3	Assigning static IP address to PC and implement basic command of Computer network like PING, traceroute etc.		
4			
	Implementing VLSM network using Packet Tracer.		
5	Understanding Router concept, types of router, different type of ports on router and how to configure a Router.		
6	Configure network topology and implement static routing using Packet Tracer.		
7	Configure network topology and implement dynamic routing protocol such as RIP, EIGRP etc. using Packet Trace	er.	
	(i) Configure DHCP Server in the Network using packet tracer.		
8	(ii) Configure HTTP Server in the Network using packet tracer.		
	(iii) Configure DNS Server in the Network using packet tracer.		
9	Implementation of VLANS using packet tracer.		
10	Troubleshooting existing network.		
	1. Identify and use various networking components, transmission media for establishing a network		
	2. Implement n/w topology using network devices through packet tracer.		
Course Outcomes:	3. Analyze performance of various communication protocols.		
	<ol><li>Understand and configure routing algorithms through packet tracer.</li></ol>		
	5. Implement device sharing and troubleshooting in the network.		
Subject Code	CS1284	Total Contact Hour	20
Semester	4th	Total Credit	1.5
Subject Name	Programming in Python Lab		
	List of Experiments		
1	Program on basics of python Programming Language.		
2	Program on basic Data Structures in Python.		
3	Program on Conversion from on data type to another.		
4	Program on Functions in Python.		
5	Program using Object Oriented Programming in Python.		
6	Program using Inheritance in Python.		
7	Program using String in Python.		
8	Program using Regular expression in Python.		
9	Program using File Handling in Python.		
10	Program using basics of Pandas and Matplotlib module in Python.		
10	CO1: Understand the Python Language and its features.		
	CO2: Apply sequence data and control statements to solve problem		
Course Outcomes	CO3: Able to create user defined functions to solve problems.		
Course Outcomes	CO4: Analyze the concept of OOPs and its implementation.		
	CO5: Create the python program using strings and files.
